COLOURED ELECTIONS

BWA 142"

People who registered as voters are not representative of people of the general coloured population of voting age: this is the single most important factor to consider when analysing the election results.

This is demonstrated by the fact that there are almost as many people of voting age who are not registered voters, as there are registered voters.

Therefore, for there to be even a semblance of representivity, close on a hundred percent of the registered voters would have to vote. IN fact only ( 30 y%) of registered voters voted. This means that the whole electoral process taking into account the total adult population only represents the will of ( 17% ~~y% x0,585~~) of that population, at best.

We say at best because the events of today and the past week throws doubt as to whether even this (later) percent are truly representative :

- Pensioners and those dependent on the state have been coerced into voting by threats of loss of pensions, houses etc
- The extent of illegitimate voting was seen in the debacle preceding the elections when thousands of special votes were cast by people apparently not qualifying to cast such votes this is not to other dubious practices associated with the voters role
- Finally the general atmosphere of state intimidation on polling day and the days preceding it were calculated to make fe people fear the consequences of not voting.

It is universally accepted that no free and fair election can take place in a climate of harassment and fear. As the UDF has pointed out these elections were in fact conducted in the context of an undeclared State of Emergency

The UDF considers the results a massive victory. Despite the extent of intimidation our people have refused to be divided or to be hoodwinked. The rejection of the tri-cameral parliament by the coloured people can only be described as overwhelming.

UDF analysis of election patterns

The UDF's research reveals the following dramatic patterns in the elections:

1. 650 636 coloured adults did not even bother to register for the elections
2. ONLY ( 17 ) % of the adult coloured population participated in the election
3. ( 63 )% of the coloured people could see no advantage in participating in the elections
4. The apparently high percentage polls for certain areas is utterly misleading . This is for two reasons
  - a. Firstly , because of the massive discrepancy between the adult population and registered voters . this can be clearly seen in the following Transvaal constituencies

(i) Bosmont :

official percentage poll was 32 %  
 yet only 1668 people voted out an adult population of 10671  
 one can therefore see that only 15,62% of the adult Bosmont population participated in the election  
 84,38% saw no point in participating.

(ii) Eldorado Park

official percentage poll 36,3%  
 numbers voting 3947  
 adult population 40905

(iii) N. TL votes caste as percentage of adult population 11,25  
 \* vote cast as % of adult pop. 11,25  
 20 67-240 751 voting Adult Pop. 11121

- b. Secondly , because of the relatively small size of certain constituencies, together with the fact that these are often conservative rural constituencies, pushes up the percentage poll in which the people are totally at the mercy of unscrupulous W. farmers, pushes the 20 poll up.
